SYNERGY WHISKEY RANGE

Exploring Whiskey's Flavour Spectrum

Synergy Flavours has drawn on its 140-year beverage expertise to develop new whiskey flavours and a whiskey cocktail flavour for alcoholic beverages and the low and no market.

Flavour Analysis

Using Gas Chromatography - Mass Spectrometry (GC-MS) and Chromatography with Flame Ionisation detection (GC-FID), our analysts reviewed different whiskeys to understand their key aroma compounds.

Detailed analytical insights are crucial to re-create authentic, versatile and varied whiskey flavours.

Whiskey Flavour Creation

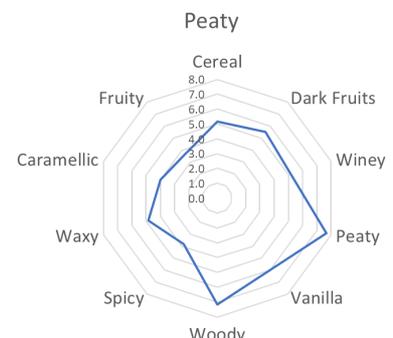

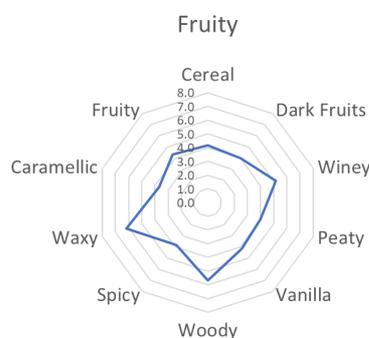

Using the findings from our analytical team, our expert flavourists have developed a range of whiskey flavours in line with the different aroma compounds identified in our analysis.

Sensory Profiling

Our sensory maps allow you to select the right whiskey flavour in line with your desired profile.

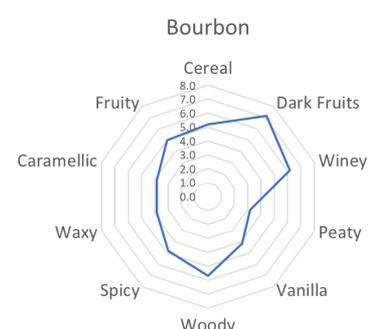

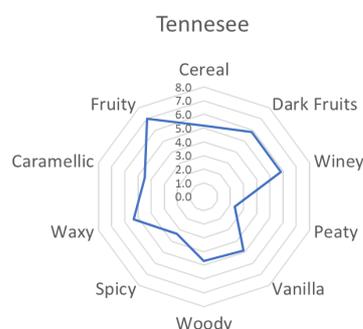

Scotch style:

More peaty, waxy, woody flavours

Bourbon style:

More Spicy, dark fruit, winey flavours

“ Our whiskey flavours deliver authentic taste, mimicking the complexity of the different types of whiskey. ”

The Range

The multiple whiskey flavour options enable you to customise your beverage and add sufficient complexity in both alcohol beverages and low and no products. Our whiskey range includes:

-  Bourbon whiskey
-  Fruity Whiskey
-  Tennessee style whiskey
-  Old fashioned
-  Scotch peaty style whiskey
